

GOGREEN PLUS

GREEN LIGHT FOR A GREEN FUTURE

GoGreen Plus reduces emissions of carbon dioxide & other greenhouse gases through investments in green transportation technologies & fuels (carbon insetting). To take part in this green initiative, you can book shipments with a price premium which is entirely invested in green road transportation. You will continue to receive the highest reliability and priority for your shipments, while also helping to save our planet.

Green. Flexible. Reliable.

DHL Freight – Excellence. Simply delivered.

In a sustainable way.

GOGREEN
PLUS

OUR NEW GREEN OPTION EXPLAINED

GoGreen Plus is our carbon insetting option helping to decarbonize road transportation. Unlike carbon offsetting, investments are undertaken in green technologies & fuels in the transport network and not in projects in other sectors. Benefit from a transparent climate-neutral service while having access to all the existing benefits of our products.

DHL Freight signs agreements with carriers in our network who invests in more costly clean technologies within its own fleet or agrees with partners to invest in such technologies.

DHL Freight matches your shipment with our green capacities, and the price premium is entirely invested in the cost delta for climate-smart transport solutions.

Transportation is being undertaken using Bio-LNG / CNG, HVO, hydrogen, or battery-electric transport.

For quality assurance, the program will be audited by an external agency. Vehicles and fuels are monitored to ensure that at least as many tons of CO₂e are avoided as the total sum of insetting capacities ordered by customers.

DHL FREIGHT'S KEY PROMISES

- **Full reinvestment in green technologies**
Customers can trust DHL Freight that premiums are fully invested in green transportation technologies – where it is efficient and fits with operations
- **Reporting and certification on inset emissions and used technologies**
DHL Freight is transparent about inset emissions and used technologies, offering carbon reports and certifying the amount of emissions inset
- **Full service offering, easy to book**
DHL Freight will take care of all implementation aspects, along with the vision of booking green transportation is as easy as buying green electricity

WHERE IS IT OFFERED?

Our insetting option is already offered in key markets across Europe and we keep on expanding our green transportation offering in all our markets. Please get in touch with your DHL Freight sales representative to get more information about the availability in your country.

BENEFITS FOR OUR CUSTOMERS

Improved carbon footprint

Customers decrease their carbon footprint to be aligned with science-based targets or other (Government) regulations/standards

Green reputation

By communicating their green choice to their customers, employees, and shareholders, DHL Freight's customers can increase the value of their business
